

The Mission of the Oncofertility Consortium

To focus on the **fertility threat** poised by cancer treatment and serve as an **authoritative voice** for patients while creating **corridors of discovery** between research disciplines, clinical practice and training that can be created at the intersection of oncology, pediatrics, reproductive science, policy research, reproductive health law, bioethics, communication science, and cognitive and learning science.

...exploring and expanding options for the reproductive future of cancer survivors

This work was supported by the Oncofertility Consortium NIH UL1DE019587

Oncofertility is...

A Funded **NIH Grant**

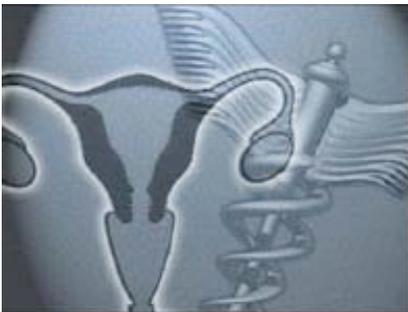

A Mechanism to Make An Intractable **Problem Tractable**

A **Brand**

An Exemplar of **Interdisciplinary Work**

A Pathway for **Basic Research Breakthroughs**

A Nucleating **Clinical Program**

FOR PATIENTS

Today's treatments for cancer and other serious diseases are highly effective and have allowed more patients to survive their disease and go on to live full and productive lives. However, some of these same lifesaving treatments may also affect your ability to have children in the future. But, there are steps you can take BEFORE your treatment begins in order to preserve your fertility later on. Fertility preservation options are different for every patient, depending on how long you are able to safely delay the start of treatment, your age, your gender and whether you have a partner or access to donor sperm. Even if you have already undergone treatment, there still may be some options for preserving your fertility.

MyOncofertility.org

To learn more about the potential effect of cancer (and other serious diseases) and treatments on your fertility, as well as the options for preserving your fertility and resources for discussing these issues with your doctor, please visit myoncofertility.org.

Find a Physician

Find a doctor near you who can talk with you about your fertility preservation options. The interactive Find a Physician map will be coming soon.
